

Hoop Barrier 60mm

Hoop Barriers or Forecourt Protection Hoops have become a popular method of securing large perimeters for the motor dealership industry. These can be manufactured in various diameters, lengths and heights, either root fixed, or bolt down in a variety of finishes, such as galvanised, galvanised and powder coated or stainless steel.

In more recent times the hoop barriers has also been used for retail parks, open space urban restrictions, and trolley bays, where a mid-rail is often used, and are also available as a security barrier, c/w integral locking mechanism.
