

## STANDARD RUBBER BOLLARD

Product Code: SFD5173

## PRODUCT DESCRIPTION

The Standard rubber bollard is mainly used where large vehicles may come into contact with the bollard. More than 300 kilos are needed to bend the bollard to an angle of up to 45 degrees. If a vehicle collides with the bollard at high speed the forces involved are much greater.

Rubber Bollard is solid and consists of 60% new rubber and 40% of vulcanised rubber from the production of transmission belts and V-belts.

## SPECIFICATIONS

Weight	42.00 kg
Length	1500mm
Diameter	150mm
Fixing	Root Fixed
Material	Rubber
Colour	Black
