

PARABOLA ILLUMINATED BOLLARD

Product Code: SFD5813

PRODUCT DESCRIPTION

These robust, vandal resistant dusk to dawn bollard lights have double 'Parabolic Reflector' heads and clear, high quality UV stop PC diffusers. The louvres and diffuser enable an even, downwards light dispersal around the bollard and add protection to the bulb. The light effect is one of a low-level glowing post, marking the way.

The Professional 'In-Ground' Root Mount System gives extra security and stability. The tubular bodies of Root mount bollards are different to a standard types. Extended tubes allow at least 400mm to be concreted in-ground, without losing any height above ground. A strong mounting bar inside the tubular body acts as an anchor when set into concrete. There is an optional secure cable outlet. This allows easy wiring after the bollard is fixed in place.

A matte garden green or graphite black finish is available. There is also a choice of height (600mm, 800mm or 1000mm). Ideal for driveways and paths, there are also 3 styles of head to choose from: 'domed', 'pillar' or 'flat' top.

The head and 2.5mm thick extruded aluminium cylinder of the bollard are heavy duty die-cast aluminium. All screws are stainless steel, resulting in a completely rustproof and non-corrosive model.

The inbuilt photocell dusk to dawn sensor automatically turns the bollard light on when it detects dark and off again when light. Therefore, there is no need to remember to switch the fitting on and off manually, which results in less product maintenance. The E27 / ES bulb holder accommodates almost any LED bulb. Using LEDs is a very effective way to reduce energy bills.

SPECIFICATIONS

Weight	9.00 kg
Height	400 / 600 / 800 / 1000mm
Diameter	170mm
Fixing	Multiple Options
Material	Aluminium
Colour	Galvanised
