MANUAL ARM BARRIER

Product Code: SFD564

PRODUCT DESCRIPTION

The Manual Arm Barrier provides a low maintenance, cost-effective way of manually controlling access to unauthorised areas on a permanent or temporary basis. Durable and hard-working, this manual raise arm barrier has been manufactured for the last 32 years and compromises a robust and high quality pivot post, lockable end rest and aluminium boom.

Carefully designed pivot post has the strength to cover up to 8 metre road widths and still be easily operated by one person alone! When combined with a stainless steel pivot bar and two heavy duty, anti rust bearings this barrier is a great way of ensuring complete traffic management.

Our SB.4 can be locked in either vertical or horizontal positions thanks to its padlock facility (Padlock and fixings included) and is available to cover road widths from 3 metres up to 8 metres. Half sizes are also available on request.

As standard our barriers are supplied red, with an red/white or yellow/black boom. If you require an alternative colour please contact the sales team.

For wider entrances two barriers can be used together in conjunction with a central locking sleeve, pogo stick or removable end rest.

Please note: Barrier must be locked when left in the upright position

SPECIFICATIONS

Height	Boom height from ground - 1067mm
Diameter	76mm
