

IVY CORTEN STEEL RECTANGULAR PLANTER

Product Code: SFD625

PRODUCT DESCRIPTION

Ivy Corten Steel Planters add an urban and industrial twist to landscapes.

Corten Steel also known as weathering steel is widely used for cladding buildings and has been used for structures such as 'The Angel of the North' it is a steel alloy containing copper as well as Chromium and Nickel which oxidises giving a rusty appearance. This can be lock formed together to create beautiful Corten Steel Planters. This is ideal in public places where there is a high risk of vandalism as any scratches soon rust over again.

Due to the very nature of the material these planters will stain patios, decking and clothing. We can reduce the chances of stain marks to clothing and hands by lacquering the outer surfaces once the Corten has corroded sufficiently. There is an additional charge for this service, the lacquer can be a gloss or matt finish. We recommend all Corten Planters are recessed into the decking or pavements to prevent visual staining, as the corrosion process will continue for 6 to 12 months.

There are some standard sizes available but bespoke Corten Steel Planters can be made for very little extra cost.

Our Corten Steel Planters will need time to weather therefore please allow longer time for delivery.

SPECIFICATIONS

Length	750mm
Width	200mm
Height	200mm
Fixing	Surface Mounted
Material	Steel
Colour	Galvanised
